

Division

LESSON PLAN

SPECIFIC OBJECTIVES

The students will

- recall the concept of division.
- learn division using multiplication facts.
- learn how to do long division of 4 digit numbers by numbers up to 15 without/with Remainder.
- understand the use of division in daily life situations.
- understand the division facts/properties.
- do multiple operations together.

CONTENTS EXPLAINED INSIDE THE CHAPTER

- More Division Using Multiplication Facts (pages 51–52)
- Long Division Without Remainder (pages 53–54)
- Long Division With Remainder (pages 54–55)
- Division Stories (pages 56–59)
- Division Facts (page 59)

TEACHING AIDS

Counters/beads, paper, a pencil, squared paper, a chalk and a blackboard.

TEACHING STRATEGY

- At the beginning of the chapter, the teacher should recall the concept of division learnt earlier in class II. Thereafter, she should ask the students to do 'Let Us Recall' exercise.
- Then, the teacher should recall multiplication table of any number from 11–15 and make division facts for each multiplication fact on the blackboard interacting with the students. For text and exercise, she should go to pages 51–52.
- Next, the teacher should explain how to perform long division without remainder by going to pages 53–54 and instruct them to solve the questions given in exercise 1.2. She should also focus on common error committed by the students.
- Further, the teacher should explain the long division with remainder for 4-digit numbers. She should go to pages 54–55 for text and exercise.

- Thereafter, she should discuss some daily life situations where they need to apply the process of division. For text and exercise, she should go to pages 56–59.
- Henceforth, she should also talk about the division facts/properties as given on page 59 and instruct them to do exercise 1.5.
- For solving math maze given under the puzzle, the teacher should move 2–3 steps by solving the problems from entry and then encourage the students to search the path to go ahead.
- She should motivate them to enjoy the task given under Maths Lab Activity.
- Finally, the teacher should explain to them some ideas to complete the project work given at the end of the chapter.

For example, three students A, B and C shade or mark their rectangles as follows:

In each case, $3 \div 3 = 1$.

EXPECTED LEARNING OUTCOMES

Students are able to

- do the division using multiplication tables of numbers up to 15.
- perform the long division of 4-digit numbers by the numbers up to 15 without/with remainder.
- tackle the problems involving division in daily life.
- understand the division facts/properties.
- do the four basic operations together.
- divide pieces of some items into a certain part in different ways.
