

3. 17 Camels and the Three Sons

WORKSHEET

1

COMPREHENSION

Read the passage below and answer the questions that follow.

Life often presents us with tough and tricky problems. These challenges may seem impossible at first, but with the right approach, they can be solved. The first step is to stay calm and not panic. When we panic, we cannot think clearly. Instead, take a deep breath and focus on understanding the problem.

The second step is to break the problem into smaller parts. Solving a small part of the problem can make the bigger task easier. For example, if you have a lot of homework, divide it into smaller tasks and complete them one by one.

Another useful strategy is to seek help from others. Sometimes, family members, teachers or friends may have good advice or solutions. Talking about your problem can also help you see it from a different perspective.

Creative thinking is also important. Think of different ways to solve the problem. Sometimes, the best solution is one you haven't thought of yet. Be open to trying new ideas.

Lastly, never give up. Some problems take time and effort to solve. With patience, determination and a positive attitude, you can overcome almost any challenge. Remember, every problem is a chance to learn something new and grow stronger.

A. Answer the following questions.

1. The first step in solving a problem is to

(a) panic.

☐

(b) stay calm.

☐

(c) ignore it.
